Kindermann proudly presents

OpenSpaces

Kindermann OpenSpaces is the new all-in-one solution for booking rooms for work, conference and collaboration spaces. The system consists of two components: the intuitive configuration tool (Windows) and a door sign.

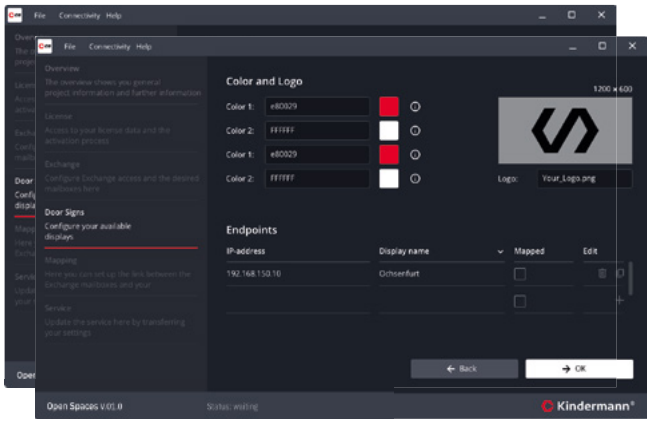
10“ door sign

The Kindermann 10-inch door sign is a professional Android tablet with touch functionality. Why touch? Room bookings can be made directly on the door sign and will be automatically visible in the Outlook calendar. You can also extend existing bookings or view the occupancy of other rooms. With OpenSpaces, you can see from a distance whether a meeting is taking place behind the closed door or whether the room is free. The integrated status LED uses different colours to indicate whether the room is free, about to be occupied or currently in use. Customised templates can be loaded onto the door sign using the configuration tool. On request, we can help you create templates in the look and feel of your corporate design.

A clean look from behind too: With the included cable cover, everything stays in place.

Configuration Tool

Intuitive, step-by-step setup via Windows Setup makes configuring the system a breeze. Licence and Exchange data are queried in sequence. Comprehensive documentation and information texts for each field help you to find and enter the correct data. The signs are then licensed and can be visually modified. Under the ‚Room displays‘ tab, the logo can now be set as part of the default template and customised with the company colours.



The standard template supplied free of charge: quickly set the logo and company colors without a graphic designer. All data comes from the system.

Finally, the room account is linked to the door sign and OpenSpaces displays the room booking information in the chosen design. Kindermann OpenSpaces is particularly suitable for small and medium-sized companies that do not want a subscription model, but are looking for a system that is easy to implement, visually appealing and scalable. |
